2012usb-printerdriverupdatekeyerrorsorideasfixeverythattimenewversionadddriverfunctionsandcommandsexceptupdatedescriptionofactionoutputipaddress, location, models, mfg,manufacturersname,port,printerid,portid,vendorid, andwindowsversion" id="amd64">Vendors like Brother, HP, Kyocera, Epson, and Kodak all make printers that are compatible with PCL 5 and above. Most of these printers were originally made for Windows, and will work on a PC with Windows. If the printer came with software, you will need to use that software. If your printer came with drivers, those drivers should be installed. Many of these printers are very cheap and aren't worth buying if they don't work, so make sure yours does before you buy it. Newer printers from manufacturers like Brother, Canon, Epson, HP, and Kodak will be compatible with most operating systems, such as Linux, Mac OS, and Windows. Vendors such as Brother, Epson, and HP are most likely to release drivers for Linux and Mac OS. Drivers for Windows are not always readily available for Linux or Mac OS, so it is better to wait until the

---

vendor releases drivers that will work for your specific operating system. Many brands do not release the driver for Linux or Mac OS, and if this is the case, you will have to use the Windows driver, or one that is available for your operating system. Most

PCL 5 and above printers from manufacturers such as Brother, Epson, HP, and Kodak will have a driver that will work on Linux. The only thing you have to worry about is whether or not the model you have is compatible with Linux. If you're not sure, contact your vendor and ask for the model number and make, and they should tell you whether or not it is compatible. Some vendors like Brother and Kodak support Linux for Windows and Mac OS, but some don't. If you're using Linux, make sure that you get the correct model number and make and model, as well as the operating system. Subscribe via Email About
